SUMMARY

Senior full-stack engineer (React, TypeScript, Ruby on Rails, Node, GraphQL) with 10+ years building consumer and marketplace products at Shopify, Faire and Owner.com. Leads multi-engineer product and accessibility initiatives end to end, from design doc to rollout, and builds with agentic AI tooling as a default.

EXPERIENCE

Owner.com · Senior Software Engineer — Sep 2025 – Present · Remote

Online Ordering: the guest-facing menu, cart and checkout experience, shipped across web, branded app and kiosk.

- Led WCAG 2.2 AA remediation across menu, cart and checkout for two external audits: closed 131 of 161 findings from one, triaged 109 from the other into root-cause tickets, and personally fixed 120+ of ~280 findings, including two committed in a lawsuit response.
- Built an internal accessibility portal for the whole engineering org (185 of 191 PRs): agentic audits of live storefronts, pull requests, vendor reports and legal demand letters, findings auto-filed to Linear, every release audited automatically. Launched org-wide Sep 2026; used by Engineering, Legal and CS.
- Productionized a Playwright + axe-core accessibility suite: critical checks on every pull request, full suite daily, agent-written root-cause reports on failures.
- Led Include Utensils, a single feature spanning web, branded app, kiosk, POS, kitchen tickets, restaurant settings and an in-product AI agent: wrote the TDD, broke it into 37 tickets across 6 milestones, coordinated the teams on each surface, and rolled it out to 100% of restaurants (Nov 2026).
- Designed and built Unified Client Cart State, making the server cart the single source of truth for checkout intent and retiring a divergent localStorage store behind race conditions; shipped behind shadow-write and cutover flags to 100% of staging.
- Cut "order already placed" checkout errors ~85% on rollout (83 to 13 per day) with a flag-gated cart-validation dialog, shipped in my first two weeks.
- Authored reusable agent skills (WCAG audit, comment audit) and ran Codex and Claude Code daily: overnight bug reproductions, second-pass reviews, agent-drafted rollout plans.

Faire · Senior Software Engineer — Jul 2023 – Sep 2025 · Remote

- Engineering lead on several shipping-platform projects for the brand and retailer portals, setting product goals and coordinating contributing engineers.
- Reworked the address form in the base component library, improving localization and address data quality on every Faire surface.
- Shipped the frontend for multiple new product flows in React and TypeScript.

Shopify · Senior Frontend Developer — May 2019 – May 2023 · Waterloo, ON & Remote

- Full-stack on Flow and the Shop app: built a Kafka-driven event platform and React front ends for the Shop sales channel (Rails, React, TypeScript, Redux, GraphQL).
- Led projects that improved performance and reliability of Shopify's web platforms.

TextNow · Software Technical Manager — Aug 2015 – May 2019 · Waterloo, ON

- Built company-wide internal tooling: a React CRM platform, inventory and sales management, and the activation and calling platform (Rails, React, PHP, Go).

SKILLS

Languages TypeScript, JavaScript, Ruby, SQL
Frameworks React, Node.js, Ruby on Rails, GraphQL, Redux, PostgreSQL, Kafka
Tooling Codex, Claude Code, agentic workflows, Playwright, axe-core, Datadog, Git

EDUCATION

University of Waterloo · Bachelor of Computer Science — 2010 – 2015
Wilfrid Laurier University · Bachelor of Business Administration — 2010 – 2015
